

PEHCHAN

NGO Management & Social Impact Platform

Project Documentation & Demonstration Report

A unified platform designed to connect NGOs, volunteers and donors while organizing events, donations, certificates, financial activities and social-impact tracking.

Application: Cross-platform Flutter application

Primary demonstrated role: Volunteer

Purpose: Project overview, modules, workflows, UI and technical documentation

1. Project Overview

Pehchan is an NGO management and social-impact platform that brings common NGO activities into one organized digital system. It is intended to reduce dependency on manual or disconnected records and give stakeholders a consistent way to manage participation and contributions.

Core idea: Connect people, organizations and contributions in one platform where participation, donations, certificates and impact can be recorded and viewed.

Problem Statement

NGOs may need to coordinate events, volunteers, attendance, donations, certificates, expenses and impact reporting. Managing these areas separately can make records difficult to maintain and can reduce visibility into the organization's overall activity.

Solution

- Centralized NGO, volunteer and donor workflows.
- Event discovery, registration and participation tracking.
- Money and material donation records.
- Certificate generation and verification support.
- Internal NGO wallet/ledger and expense management.
- Social-impact tracking based on recorded activities and outcomes.

2. Objectives

- Create a single digital platform for NGO management activities.
- Make volunteering opportunities easy to discover and join.
- Maintain clear donation and transaction records.
- Provide structured certificate management after eligible participation.
- Help NGOs monitor volunteer engagement, events and social impact.
- Provide a responsive cross-platform user experience.

3. Users & Roles

Role	Main purpose
Volunteer	Discover events, register, participate, track hours, donations and certificates.
NGO	Manage events, volunteers, donations, expenses, certificates, inventory and impact.
Admin	Platform-level oversight of users, NGOs, activities, reports and audit records.
Donor	Support causes through money/material contributions and track contribution history.

4. Major Modules

- NGO Event Management — event creation, publishing, registrations, capacity, attendance and event impact.
- Volunteer Management — volunteer profiles, skills, availability, participation, attendance and hours.
- Certificate Generation — eligibility, certificate issuance, viewing, downloading and verification.

- Money Donations — monetary contributions, purposes and payment status.
- Material Donations — physical goods, quantities, categories, condition and inventory updates.
- NGO Wallet — internal financial ledger for valid inflows and outflows.
- Expense Management — expense submission, review, approval and payment workflow.
- Social Impact Tracking — measurable indicators, event outcomes and impact reporting.

5. Navigation & Design

The public website introduces Pehchan and provides access to the main stakeholder journeys. Authenticated users are shown a role-aware application area. The UI uses a clean light theme, green/teal social-impact accents, rounded cards, clear typography and responsive layouts.

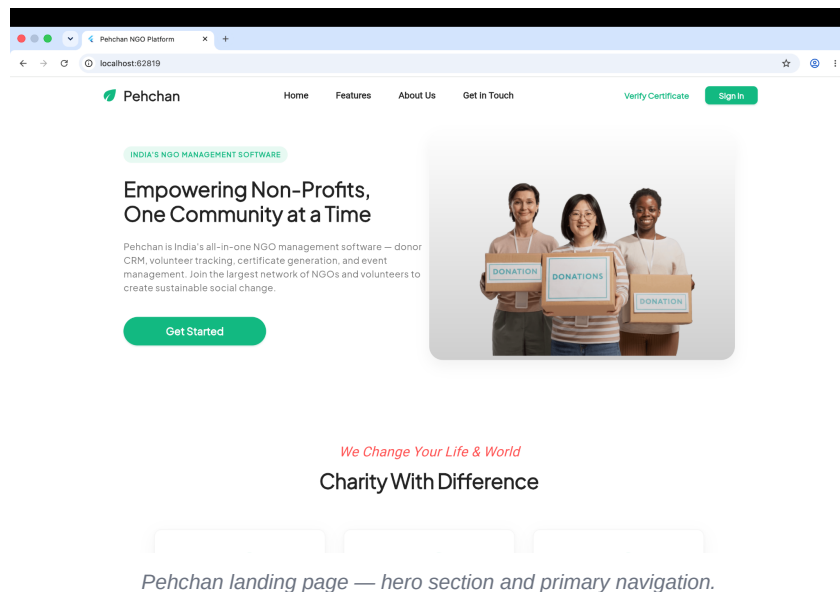

Public navigation

- Home
- Features
- About Us
- Get in Touch
- Verify Certificate
- Sign In

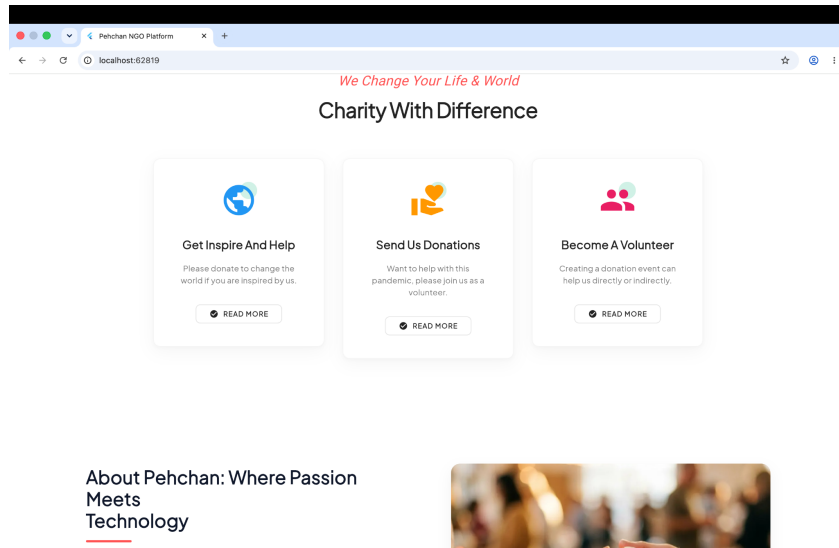

Volunteer navigation

- Overview
- Events
- Wallet
- Certificates

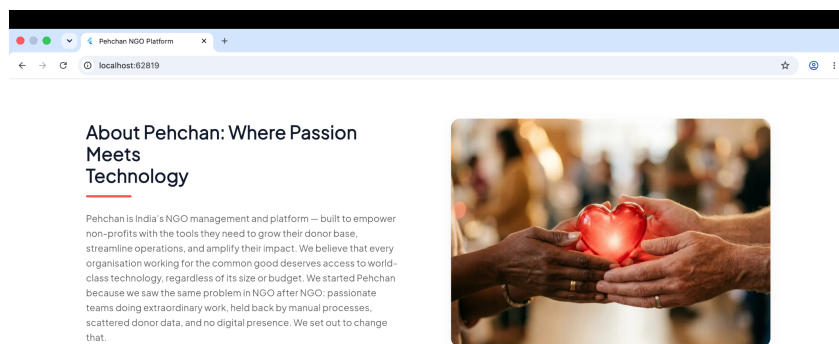

6. Screenshots — Public Experience

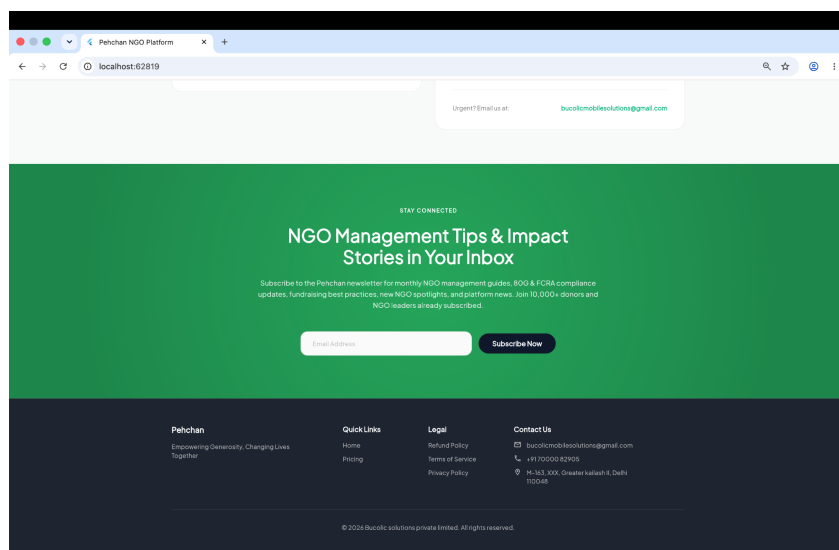

Pehchan landing page — hero section and primary navigation.

Pehchan landing page — charity actions and About section.

Pehchan landing page — Get in Touch section for donors and NGO partners.

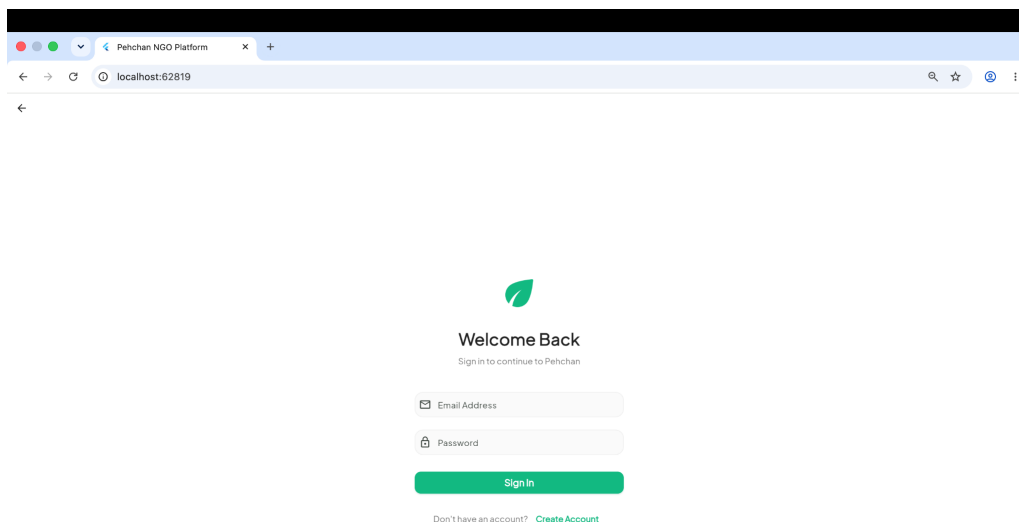

Volunteer dashboard — personal impact and recommended events.

7. Volunteer Dashboard

The volunteer dashboard is personalized around contribution and next actions. It immediately shows impact metrics and recommended opportunities.

Key information

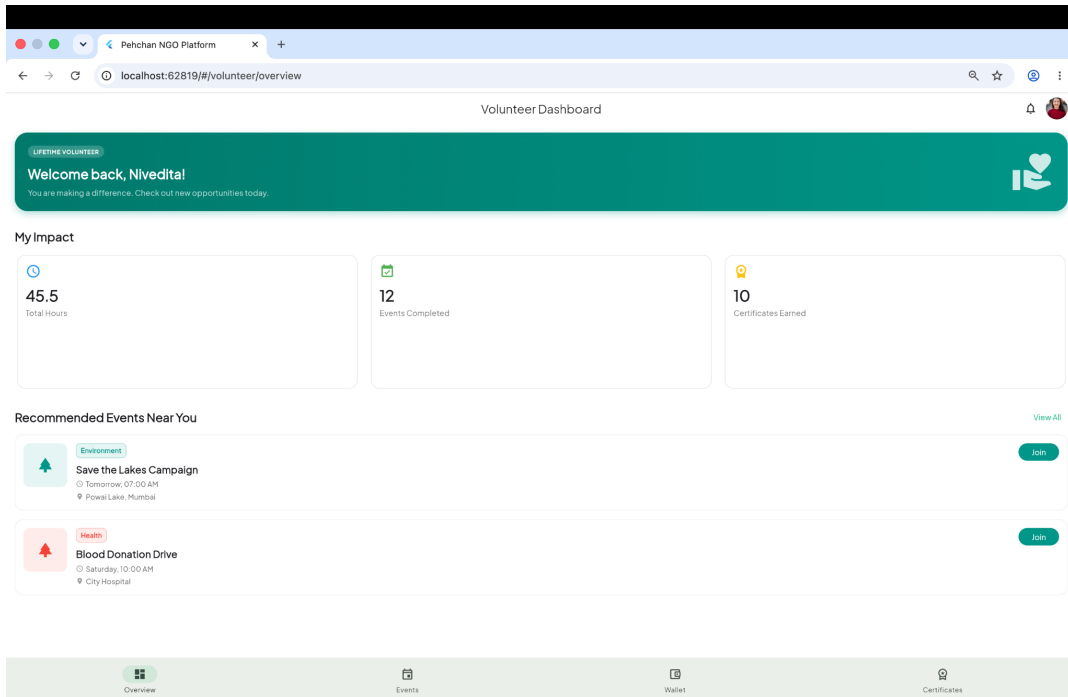

- Total volunteer hours contributed.
- Events completed.
- Certificates earned.
- Recommended events with category, date, time, location and Join action.
- Simple bottom navigation for Overview, Events, Wallet and Certificates.

My Events — upcoming, ongoing and completed participation.

8. My Events

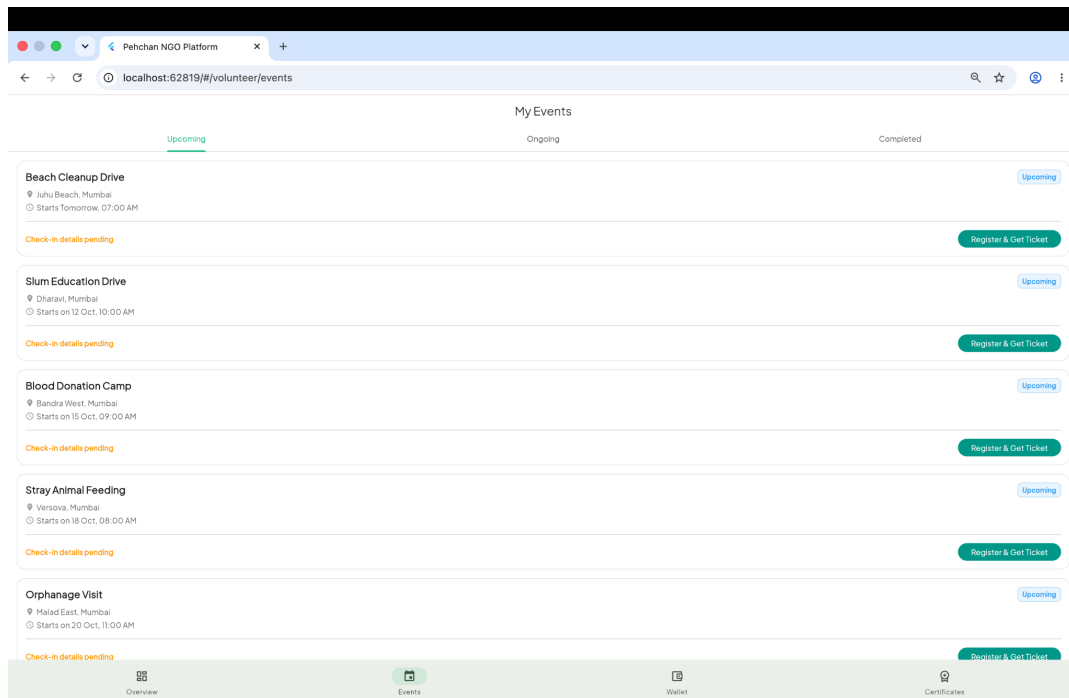

My Events separates participation into Upcoming, Ongoing and Completed states. Event cards show location, start date/time, status and registration/check-in information.

Wallet & Donations — total contribution and recent transactions.

9. Wallet & Donations

The volunteer-facing wallet screen provides a clear contribution history. It shows the total amount donated and recent transactions with the supported NGO and purpose.

My Certificates — earned certificates with view/download actions.

10. Certificates

The certificate section provides volunteers with a digital record of certificates earned through eligible activities. Each card provides event information, issue date and view/download actions.

Get in Touch

11. Certificate Verification Workflow

Pehchan — NGO Management & Social Impact Platform

Page 8

- Volunteer participates in an eligible event/activity.
- Participation or attendance is recorded.
- Event is completed and eligibility conditions are satisfied.
- NGO generates/issues the certificate.
- Certificate receives a unique verification identifier.
- A third party can use the verification flow to confirm authenticity.

12. Key Workflows

Volunteer: Sign In → Explore Events → Register → Participate/Check In → Complete Event → Track Hours → Receive Certificate → Track Impact

Donation: Choose Cause/NGO → Enter Details → Payment/Record → Transaction Status → History

NGO Expense: Create Expense → Attach Receipt → Review → Approve/Reject → Validate Funds → Wallet Debit → Paid → Audit Record

Material Donation: Receive → Verify Quantity/Condition → Update Inventory → Distribute/Use → Report

13. Technical Architecture

Pehchan is designed as a cross-platform Flutter application using Dart. The architecture emphasizes reusable widgets, structured state management, route-based navigation and separation of UI from data access.

Layer	Responsibility
Presentation	Flutter screens, widgets, responsive layouts, forms and navigation.
State	Application/session/feature state and asynchronous UI state.
Domain	Business entities and application rules.
Data	Repositories, data sources, serialization and persistence.
Services	Authentication, cloud data/storage and API integrations where required.

14. Flutter & Dart Concepts

- Dart variables, data types, operators, control flow, functions and null safety.
- Dart classes, constructors, inheritance/interfaces/mixins and collections.
- Futures, async/await, Streams and exception handling.
- Flutter widget tree, Scaffold, AppBar, Text, Container, Row, Column and Image.
- Responsive layouts using Expanded, Spacer, Padding, SizedBox, Wrap, LayoutBuilder and MediaQuery.
- Material 3 components and theming.
- State management and reusable widgets.
- Navigation/routing, forms and validation.
- Assets, animations and data persistence/API concepts.
- Testing and Clean Architecture/Repository Pattern.

15. Main Data Entities

Entity	Purpose
User / AppUser	Identity and role.
VolunteerProfile	Volunteer skills, availability and participation.
NGO	Organization information.
Event	Schedule, location, capacity and status.
EventRegistration	Registration and participation.
Certificate	Issued certificate and verification metadata.
MoneyDonation	Donation amount, donor, purpose and status.
MaterialDonation	Item, quantity, category, condition and status.
WalletTransaction	Internal financial credit/debit record.
Expense	Operational expense and approval/payment status.
InventoryItem	Material stock and distribution.
ImpactRecord	Measured outcome of an activity/event.

16. Validation, Transparency & Quality

- Role-based access should limit features and records to authorized users.
- Forms should validate required fields and invalid values before submission.
- Financial balances should be derived from valid ledger transactions, not directly edited.
- Certificate issuance should be tied to eligibility/participation records.
- Important financial and administrative changes should be traceable.
- Loading, empty, success and error states should be handled.
- Impact metrics should be based on recorded data and should not invent outcomes.

17. Conclusion

Pehchan brings NGO events, volunteer participation, donations, certificates, financial operations and social-impact tracking into one unified experience. The demonstrated volunteer flow shows how a user can discover opportunities, participate, track contributions and access certificates without switching between multiple systems.

Final value: better organization for NGOs, clearer participation records for volunteers, transparent contribution tracking and a stronger foundation for measuring social impact.

Pehchan — Connecting people, organizations and social impact in one platform.
